

DIG 2018

CONFERENCE

FRIDAY, 31 AUGUST 2018

Registration Open

www.trybooking.com/VYNY

Dieback Information Group (DIG) is Western Australia's annual conference for industry, community, researchers and Government to share current programs, research developments and management tactics to combat native plant diseases, including Phytophthora Dieback.

This year, big ideas and emerging issues will be presented by Dr Richard Walley OAM, Dr Paul Barber and Prof. Giles Hardy, and new knowledge will be highlighted by researchers from UWA, Murdoch and Curtin universities. Case studies will show how community, local government and industry can work together to address Phytophthora Dieback and other key plant pathogens.

Delegates will be encouraged to actively participate and help identify future messages and actions that can be readily adopted to address the significant challenges of Phytophthora Dieback.

Bendat Parent and Community Centre - Auditorium
